

ECHOKIT®

Pendant light / 2026

HOYA

Light, diffused by form.

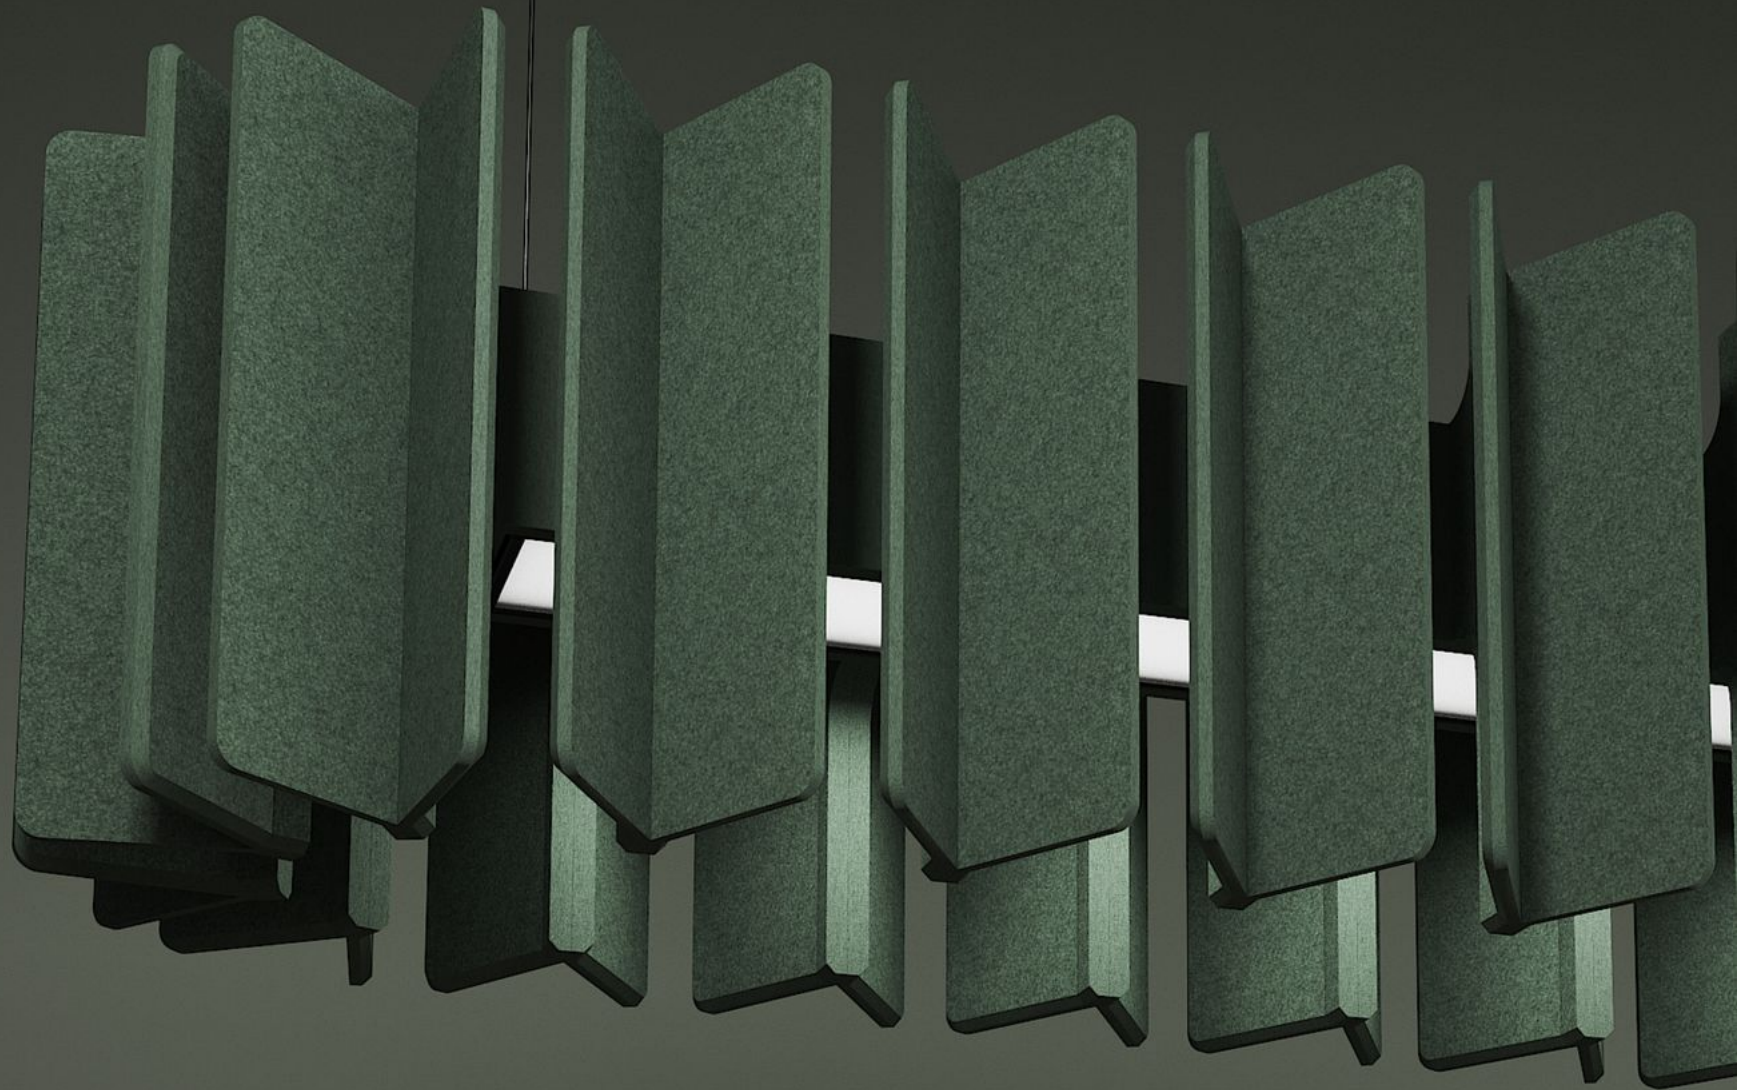

A calmer kind of
illumination

HOYA combines acoustic performance with carefully controlled lighting in a sculptural pendant. Designed for shared spaces, focus rooms and breakout areas, it creates environments that feel calmer, clearer and more comfortable.

ECHOKIT®

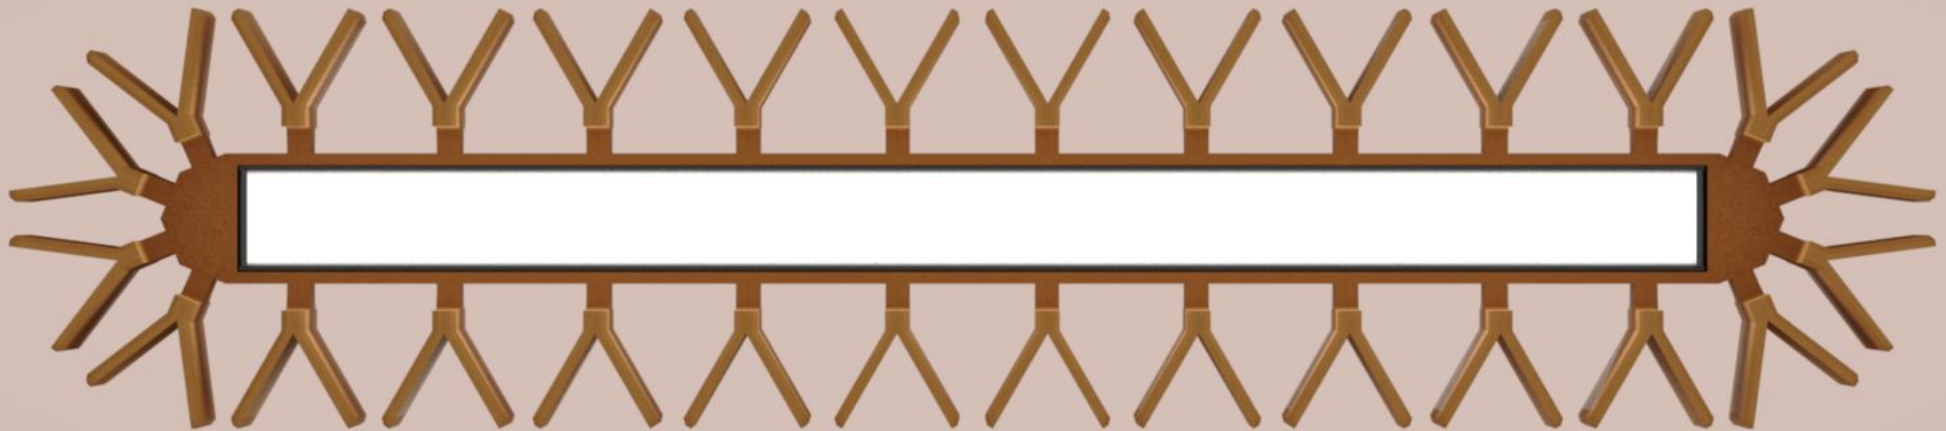

Rhythm.
Texture.
Light

A sequence of vertical lines give HOYA it's distinctive rhythm. The linear light source sits within the form, balancing visual comfort with a strong architectural identity.

ECHOKIT®

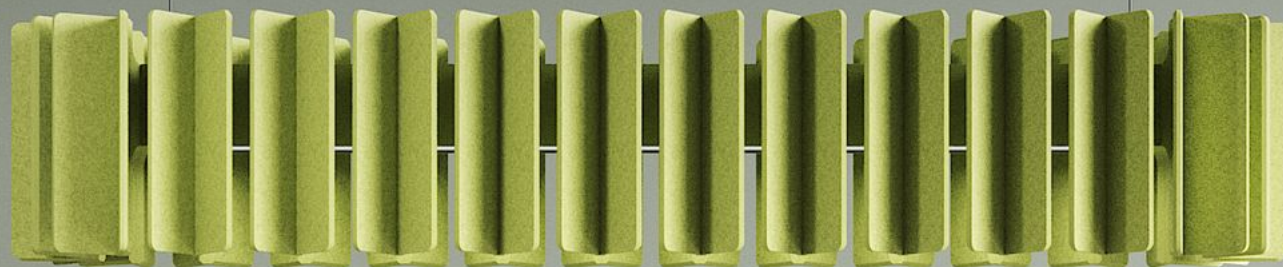

Biophilic design, applied with purpose.

Inspired by natural branching forms, HOYA uses repetition and rhythm to bring a softer visual presence. Its sculptural geometry brings warmth, texture and balance to contemporary interiors.

How HOYA Controls Sound

ABSORB - HOYA's felt surfaces capture sound waves and convert their energy into heat. This reduces unwanted reflections and controls mid and high-frequency noise, while flexible panel absorbers can target lower frequencies.

REFLECT - Sound can also be directed rather than absorbed. Strategically positioned reflective surfaces distribute sound evenly throughout a space, improving clarity and intelligibility while preventing uncontrolled reverberation.

DIFFUSE - Diffusers scatter sound waves in multiple directions to create a balanced, natural soundscape. HOYA baffles combine diffusion with absorption, dispersing and dampening sound to reduce echoes and improve overall acoustic comfort.

Psychology of Light & Sound

FOCUS - Persistent background noise, reverberation and poorly considered lighting increase distraction and mental fatigue. By combining controlled acoustics with comfortable, purposeful light, HOYA helps create environments that support clearer thinking, better communication and more productive spaces.

WELLBEING - We never truly switch off our senses. Unwanted voices, echoes, glare and uncomfortable light are continuously processed by the brain, increasing cognitive load and contributing to stress. HOYA brings light and acoustic control together, creating calmer interiors that feel more comfortable, less tiring and easier to occupy for longer periods.

PERCEPTION - Light and sound fundamentally shape how we experience a space. Controlling reverberation creates clarity and calm, while light influences atmosphere, focus and our perception of form. HOYA balances both, creating environments that feel softer, more intimate and considered — designed around not only what people see and hear, but how a space makes them feel.

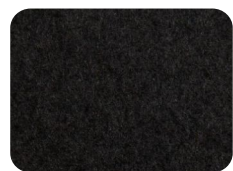

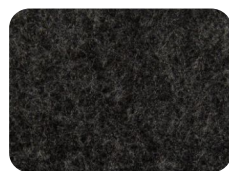

Light that adapts to your mood with ECHOBLOOM

HOYA can be specified with a choice of fixed max wattages and colour temperature options, but optionally HOYA can be supplied with a dedicated tablet pre-loaded with our ECHOBLOOM App. The intuitive interface gives people complete control over brightness, dimming, tuneable white and RGB colour-changing settings.

Fire resistance: EN 13501-1+A1, B-s2, d0
100% recyclable, formaldehyde free

Low VOC, REACH compliant. Fully recyclable at EOL
Acoustic absorption up to α_w 0.90, Class A

WE DON'T LET WASTE GO TO WASTE

We turn used plastic bottles into our ECHOFELT acoustic felt backing. Bottles are transformed into a soft yet strong PET felt material that's long lasting and has great acoustic performance.

60%

Post consumer recycled waste content.

280

Average number of recycled plastic bottles in each 12mm ECHOFELT panel.

0%

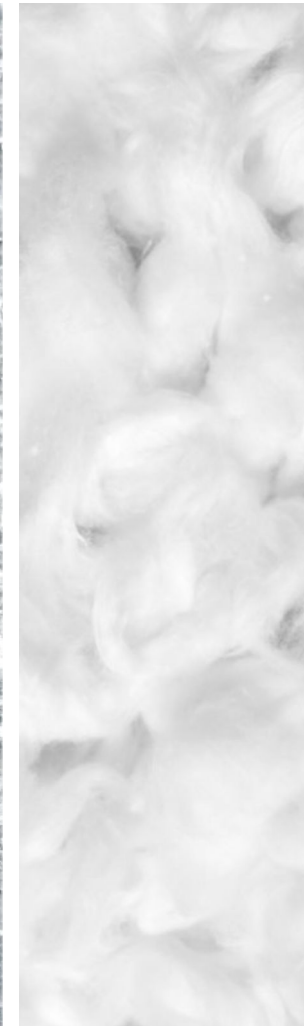

0% Formaldehyde binders in our ECHOFELT products.
